AUTHOR INDEX

Bartell, S.M., Brenkert, A.L. (Oak Ridge, TN, U.S.A.) and Carpenter, S.R. (Notre Dame, IN, U.S.A.)
Parameter uncertainty and the behavior of a size-dependent plankton model 85
Boddy, A.W., *see* North, P.M. et al.
Bosatta, E., *see* Gobran, G.R. and Bosatta, E.
Bradley, J.S., *see* McKay, R.J. and Bradley, J.S.
Brenkert, A.L., *see* Bartell, S.M. et al.
Cale, W.G. and O'Neill, R.V. (Oak Ridge, TN, U.S.A.)
Aggregation and consistency problems in theoretical models of exploitative resource competition 97
Carpenter, S.R., *see* Bartell, S.M. et al.
Comins, H.N. and Fletcher, B.S. (Canberra, A.C.T., Australia)
Simulation of fruit fly population dynamics, with particular reference to the olive fruit fly, *Dacus oleae* 213
Cui Qiwu and Lu Fengyong (Shenyang, People's Republic of China)
A mathematical model of predation based upon the theory of nutrition kinetics. 2. A nutrition structure of the predator population and its functional response to the prey 67
Duffy, D.C. (Rondebosch, South Africa) and Wissel, C. (Marburg, Federal Republic of Germany)
Models of fish school size in relation to environmental productivity 201
Fields, D.E. and Miller, C.W. (Oak Ridge, TN, U.S.A.)
A methodology for deriving model input parameters from a set of environmental data 155
Fletcher, B.S., *see* Comins, H.N. and Fletcher, B.S.
Forrester, R., *see* North, P.M. et al.
Giavelli, G., Rossi, O. and Siri, E. (Parma, Italy)
Stability of natural communities: loop analysis and computer simulation approach . 131
Glasser, J.W. (Athens, GA, U.S.A.)
Interference (and facilitation) among species that exploit alternative resources 111
Gobran, S.R. and Bosatta, E. (Uppsala, Sweden)
Cation depletion rate as a measure of soil sensitivity to acidic deposition: theory ... 25
Hammer, D.E., *see* Kadlec, R.H. and Hammer, D.E.
Kadlec, R.H. and Hammer, D.E. (Ann Arbor, MI, U.S.A.)
Modeling nutrient behavior in wetlands 37

Loman, J. (Lund, Sweden)
Alternative prey that decreases vole population cyclicity: a simulation study based on field data 265
Lu Fengyong, *see* Cui Qiwu and Lu Fengyong
Luckyanov, N.K. (Moscow, U.S.S.R.)
Iterative approximation of trophic functions 1

Mauersoerger, P. (Berlin, German Democratic Republic)
Book review of *Three-Dimensional Models of Marine and Estuarine Dynamics*, by J.C.J. Nihoul and B.M. Jamart (Editors) 77
McKay, R.J. and Bradley, J.S. (Murdoch, W.A., Australia)
Erlangian models for capture–recapture data 161
Miller, C.W., *see* Fields, D.E. and Miller, C.W.
North, P.M., Boddy, A.W. and Forrester, R. (Canterbury, Great Britain)
A computer simulation study of stochastic models to investigate the population dynamics of the Screech Owl (*Otus asio*) under increased mortality 233
O'Neill, R.V., *see* Cale, W.G. and O'Neill, R.V.
Rossi, O., *see* Giavelli, G. et al.
Siri, E., *see* Giavelli, G. et al.
Taylor, A.H. (Plymouth, Great Britain)
Characteristic properties of models for the vertical distribution of phytoplankton under stratification 175
Tyagi, N.K. (Haryana, India)
Managing salinity through conjunctive use of water resources 11
Wissel, C., *see* Duffy, D.C. and Wissel, C.
Zhang, D. (Lanzhou, People's Republic of China)
An index to measure the strength of relationship between community and site 145

CONTENTS OF *ECOLOGICAL MODELLING*, VOL. 40

VOL. 40 NO. 5 JANUARY 1988

Iterative approximation of trophic functions
N.K. Luckyanov (Moscow, U.S.S.R.) 1
Managing salinity through conjunctive use of water resources
N.K. Tyagi (Haryana, India) 11
Cation depletion rate as a measure of soil sensitivity to acidic deposition: theory
G.R. Gobran and E. Bosatta (Uppsala, Sweden) 25
Modeling nutrient behavior in wetlands
R.H. Kadlec and D.E. Hammer (Ann Arbor, MI, U.S.A.) 37
A mathematical model of predation based upon the theory of nutrition kinetics. 2. A nutrition structure of the predator population and its functional response to the prey
Cui Qiwu and Lu Fengyong (Shenyang, People's Republic of China) 67

Book Review
Three-dimensional models of marine and estuarine dynamics 77

Guide for Authors 79

VOL. 40 NO. 2 FEBRUARY 1988

Parameter uncertainty and the behavior of a size-dependent plankton model
S.M. Bartell, A.L. Brenkert (Oak Ridge, TN, U.S.A.) and S.R. Carpenter (Notre Dame, IN, U.S.A.) 85
Aggregation and consistency problems in theoretical models of exploitative resource competition
W.G. Cale and R.V. O'Neill (Oak Ridge, TN, U.S.A.) 97
Interference (and facilitation) among species that exploit alternative resources
J.W. Glasser (Athens, GA, U.S.A.) 111
Stability of natural communities: loop analysis and computer simulation approach
G. Giavelli, O. Rossi and E. Siri (Parma, Italy) 131
An index to measure the strength of relationship between community and site
D. Zhang (Lanzhou, People's Republic of China) 145

VOL. 40 NOS. 3/4 MARCH 1988

A methodology for deriving model input parameters from a set of environmental data
D.E. Fields and C.W. Miller (Oak Ridge, TN, U.S.A.) 155
Erlangian models for capture–recapture data
R.J. McKay and J.S. Bradley (Murdoch, W.A., Australia) 161

Characteristic properties of models for the vertical distribution of phytoplankton under stratification
A.H. Taylor (Plymouth, Great Britain) 175
Models of fish school size in relation to environmental productivity
D.C. Duffy (Rondebosch, South Africa) and C. Wissel (Marburg, Federal Republic of Germany) 201
Simulation of fruit fly population dynamics, with particular reference to the olive fruit fly, *Dacus oleae*
H.N. Comins and B.S. Fletcher (Canberra, A.C.T., Australia) 213
A computer simulation study of stochastic models to investigate the population dynamics of the Screech Owl (*Otus asio*) under increased mortality
P.M. North, A.W. Boddy and D.R. Forrester (Canterbury, Great Britain) 233
Alternative prey that decreases vole population cyclicity: a simulation study based on field data
J. Loman (Lund, Sweden) 265
